EDUCATION

University of Texas at Arlington | 3.81/4.0 GPA

Bachelor of Science in Computer Science

Arlington, TX

Dec 2027

EXPERIENCE

Software Engineer Intern (Incoming)

June 2026 – August 2026

Business Wire

San Francisco, CA

- Engineer client-side application logic using React, managing complex state and data flow for customer-facing platform features.
- Integrate front-end systems with backend REST APIs, handling asynchronous data fetching, caching, and error states.
- Develop data-driven features by processing and analyzing posting performance metrics to support customer reporting.

Software Developer Co-Op

March 2026 – Present

Bell Flight, Inc.

Fort Worth, TX

- Built and maintained front-end features using React, developing responsive pages for internal directive management systems on the FLRAA program.
- Integrated front-end components with backend REST APIs, enabling real-time data retrieval, submission, and updates for operational workflows.
- Designed reusable UI components and hooks to streamline state management and improve code maintainability across multiple pages.

Owner & Operator - Popup Cafe Business

May 2025 – Present

Koicha LLC

Fort Worth, TX

- Founded and operated a pop-up café business, managing end-to-end operations including menu development, staffing, inventory planning, and on-site service.
- Built a custom Google Apps Script-based order-management system that processed 5,000+ customer orders, automating logging, receipt generation, and daily reporting.
- Designed internal tools integrating Google Sheets and Apps Script to streamline order tracking, inventory updates, and real-time metrics dashboards.

PROJECTS

OpenLedger POS - Open Source Project | *Python, Flask, SQLAlchemy, PostgreSQL, React, TailwindCSS*

- Developed a self-hostable point-of-sale management system to record and manage drink orders, designed as an open alternative to centralized SaaS POS platforms
- Designed RESTful endpoints (GET/POST/PUT/DELETE) for user authentication, order creation, and inventory management, exchanging JSON over HTTP between React frontend and Flask backend.
- Designed relational schemas in PostgreSQL and mapped them using SQLAlchemy ORM to enforce structured relationships and data integrity

Fine-Tuned BERT Model for Tweet Classification | *TensorFlow, Keras, Scikit-learn, Pandas, NumPy, Matplotlib*

- Preprocessed and tokenized large Twitter datasets; applied class weighting and early stopping to address class imbalance and improve generalization.
- Fine-tuned a DistilBERT transformer model on noisy social media text, achieving competitive F1 scores while reducing compute cost by 30% versus full BERT.
- Conducted systematic hyperparameter tuning (learning rate, batch size, epochs) with cross-validation to select optimal model configurations.

MLP NFLX Stock Machine | *TensorFlow, Keras, Scikit-learn, Pandas, NumPy, Matplotlib*

- Built a full ML pipeline processing 12 quarters of stock data, including data cleaning, feature engineering, and exploratory analysis.
- Trained and evaluated regression models using cross-validation, reducing MAE through iterative tuning and feature refinement.
- Produced reproducible scripts for loading, preprocessing, modeling, and graphing stock-price predictions.

TECHNICAL SKILLS

Languages: Java, Python, C, C#, C++, SQL, JavaScript, HTML/CSS

Databases: PostgreSQL, SQLite **Frameworks:** React, Node.js, Next.js, Flask, WordPress

Developer Tools: Git, Vite, Docker, PostgreSQL, Google Cloud Platform, Jupyter Notebooks, VS Code, Visual Studio, PyCharm, IntelliJ, Eclipse, Google App Script

Libraries: pandas, NumPy, Matplotlib, XGBoost, Scikit-learn, seaborn, Brian2, Grommet

Technical Domains: Dev Ops, Analytics, Application Development
